The TechSummit Autumn Edition - focus on sustainability

The cable and telecom sector is facing a rapidly growing demand for data, but this also requires significant amounts of energy and materials. At the same time, there is an urgent need to operate in a more environmentally friendly way. This tension between technological

developments and sustainable processes will be the central theme of the TechSummit Autumn Edition.

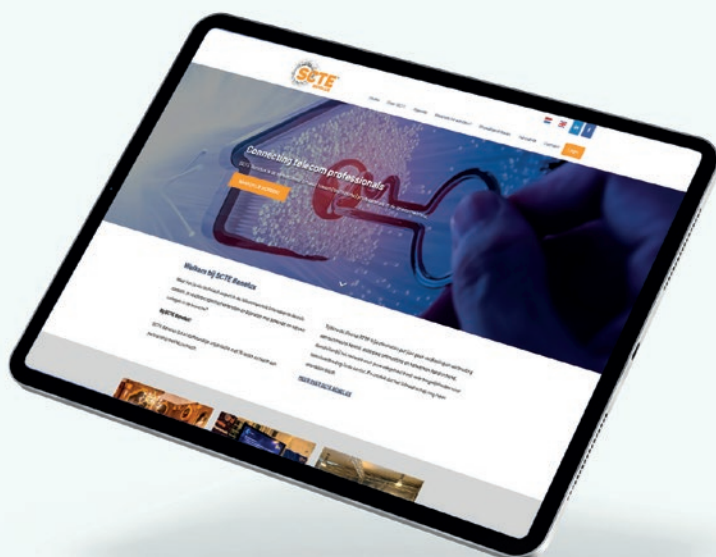

The event will take place on the afternoon of Wednesday, 5 November. The location and speakers are not yet confirmed

but will be announced shortly after the summer via the website and newsletters. This event is once again organised in collaboration with our sister organisation NLconnect.

Successful TechSummit on Private 5G

ON WEDNESDAY 9 APRIL, SCTE BENELUX AND PARTNER ORGANISATION NLCONNECT HOSTED THE FIRST TECHSUMMIT OF 2025. THE EVENT TOOK PLACE AT ODIDO NETHERLANDS. THE THEME OF THE AFTERNOON: “PRIVATE 5G – COWBOYS OR PROFESSIONALS?” THE TITLE SPARKED A LOT OF CURIOSITY, LEADING TO A SUCCESSFUL, SELL-OUT EVENT.

Our three speakers explored the rapidly growing field of private 5G. Richard Marijs (Odido Netherlands) discussed strategic applications, Jeroen Meuleman (Geuzenet) shared hands-on experiences, and Bart Heinink (Greenet) demonstrated how private 5G can produce reliable networks in practice.

SCTE Executive Committee member Peter Veerman (DELTA Fiber) acted as moderator, guiding both the content programme and the discussion.

Before the presentations, attendees were given a guided tour with an explanation of a 5G setup. Afterwards, there was a lively and valuable networking reception.

The conclusion of this inspiring afternoon: private 5G is evolving from an experimental playground into a mature solution for business-critical applications.
