

Elemendar

A STARTUP REVOLUTIONISING CYBERSECURITY WITH AI

LIOR ARBEL,
CEO, ELEMENDAR

ELEMENDAR.

At Elemendar, we envision a future in which security teams are no longer overwhelmed by the constant flood of cyber threat intelligence reports. Instead, they are equipped with the tools and insights needed to respond to cyber threats faster, smarter, and more effectively. This vision drives everything we do.

Founded by Syra Marshall and Giorgos Georgopoulos, Elemendar addresses a critical challenge in cybersecurity: managing the overwhelming amount of unstructured data from threat intelligence. Our solution uses advanced AI to make sense of that data, turning it into actionable intelligence that security teams can use immediately to protect their organisations.

THE POWER OF AI: OUR UNIQUE ADVANTAGE

Elemendar is not just another cybersecurity company. What sets us apart is our sophisticated AI technology, which automates the analysis of complex cyber threat reports. Our flagship products, READ and Compass, demonstrate this.

READ provides security analysts with rapid access to critical information, allowing them to identify potential threats with remarkable speed and accuracy. What used to take hours or even days can now be done in minutes. Meanwhile, Compass offers security leadership a comprehensive view of their organisation's threat landscape, helping them prioritise their responses and ensuring that their decisions are well-informed and effective.

Together, READ and Compass don't just streamline cybersecurity processes—they empower security professionals by giving them the tools to stay ahead of cyber adversaries.

A JOURNEY DRIVEN BY INNOVATION AND COLLABORATION

From day one, innovation has been at the heart of everything we do. Our journey began with our participation in the UK's National Cyber Security Centre (NCSC) for Startups Accelerator in 2017, where we started refining our algorithms and solutions. Since then, we've expanded our product offerings, formed strategic partnerships and consistently improved our technology through continuous client feedback.

Elemendar's solutions are trusted by organisations across multiple sectors, ranging from government and

telecommunications to energy and banking. These industries face some of the most critical and complex cyber threats, and we work closely with our clients to ensure they have the right tools to stay secure. Our AI-powered solutions are designed to handle each sector's unique challenges, ensuring fast, accurate and actionable intelligence to protect their valuable assets.

WHY WE FOUNDED ELEMENDAR

Elemendar was born out of the realisation that traditional cybersecurity methods were struggling to keep pace with rapidly evolving threats. As the number and complexity of cyber attacks grew, so did the need for smarter, more automated solutions. We established Elemendar with one clear goal: to give organisations the tools they need to stay ahead of the curve.

We knew that by leveraging AI, we could help security teams focus on what truly matters—protecting their assets and maintaining the trust of their clients—without being overwhelmed by endless manual processes.

THE FUTURE: EXPANDING HORIZONS

As we look to the future, we remain committed to our mission: empowering organisations to make informed security decisions effortlessly. We're driven by our passion to help security teams move from reactive to proactive, ensuring they stay one step ahead in the battle against cyber threats.
